An Ephemeris,

Amplified with

Astrological Observations from the Eclipses and various configurations of the heavenly bodies, for the Year of Christ 1661 being the first after Bissextile or Leap-year; Calculated for the Meridian of London, but may indifferently serve all England, Scotland, and Ireland.

Mistake not though no Picture here you see,
If Tanner *'tis you want, look, this is he.*
The Picture's *left out not, for fear nor shame,*
Hee's where he was, and here you'l find his name
Open the book and read, and you shall find
Therein contain'd, the potract of his mind.
'Twas for the book, not for the Pictures sake,
You bought before, then you'l him not forsake.
Good fellows matter not nor bush nor signe,
Nor a faire house, but where they find good wine
And such a customer's not worth a louse
That when the sign is down can't find the house.

By *John Tanner* Student in Astrology and Physick.

LONDON,
Printed by *Thomas Mabb*, for the Company of Stationers
1661.

Julian, *English*, or old Account.	according to the	Gregorian, Forreign, or New Account.

A Table of the four Terms and their Returns for 1661.

Hilary Term begins January 23 ends February 12.
and hath four Returns.

Octab. Hill. January 21 } Craft. Purif. February 4.
Quin. Hill. January 24 } Octab. Purif. February 8.

Easter Term begins May 1. ends 27
and hath five Returns.

Quind. Pasc. April 29 } Quinq. Pasch. May 20.
Tres Pasch. May 6 }
Mense Pasch. May 13 } Craft. Ascent. May 24.

Trinity Term begins June 14. ends July 3.
and hath four Returns.

Craft. Trin. June 10. } Quind. Trin. June 24.
Octab. Trin. June 17. } Tres Trin. July 1.

Michaelmas Term begins Octob 23. ends Novemb. 28.
and hath six Returns.

Tres Mich. October 21. } Craft. Mart. Novemb. 12.
Mens. Mich. October 28. } Octab. Mart. Novemb. 19.
Craft. Anim. Novemb. 4. } Quind. Mart. Novemb. 26.

'Tis true the Law's corrupt i'th' practique part
None knows it better, then the man whose heart
Corrupted is, who to the Terms doth trudge,
Seeking revenge, or else to vent a grudge:
But he who winks at others, mends his own fault,
To him both Law and Lawyer stands for nought.

Month days / Week days:

Soare not to th' heavens my fancy with clip'd wings,
Observe the motions of inferior things:
Observe what wonders here hath pass'd and gon,
within twice nine years Revolution:
And let it be the subject of thy rhymes,
To Epitomize th'clips'd Phanarick times.

Fullness begat a zeale too full of ire,
Rashly brought forth, it set us all on fire,
Expel'd, destroyed too, what not; and then
We've done the work and must begin agen;
We (hungry grown) are as mad to enjoy
Those things, which we as madly did destroy,

31	or raine.	Prot. proclam. in Dublin	1653

Month days. Week dayes.

we knockt down King and House of Lords, hard fate!
And we to building of a glorious State;
Our builders quite deceiv'd us; so we lost
what we desir'd, besides our pains and cost:
Thus harmless men, rockt in security,
Are quickly overturn'd by treachery.

Month days

The Citizens who loath'd the head before,
Forsakes the Bumpiece *now and hates it more;*
A Northern Blast *comes in to Curbe their pride,*
Blew down their Gates, their Chaines and Posts beside:
The City gales soon altered Boreas *storm,*
And they in triumph, roast the Rump *in scorn.*

March hath XXXI. days.

Exit the Remp, and those who twelve years slept
Secluded, now into the house are crept:
The waters now retire, dry land appears,
And we disband our jealousies and feares:
Brave times approach, Mountaines of Gold appeare,
Stand of Phanatick, rouze up Cavalere.

Let's not forget, how much we did adore
The famous Rump, kept out six years before;
we trusted to their help, but all in vain,
They search'd our wound, but still increas'd our pain:
'Twas here that we the Good old cause up cry'd,
'Twas here she groaning lay, 'twas here she dy'd.

Month dayes,

Here Richard *we declin'd, O Heavens blush!*
All our Addresses *prov'd not worth a Rush;*
Here House of Lords and Commons gain'd a meeting,
Some thought it sad, others a happy Greeting:
They soon resolved were to fast and pray,
And we near mad to feast and drink next day.

Month days / Week days

The Good old Cause interr'd, and in her Roome
May-Poles and merry old old customes come;
They sing and dance, they drink, carouse with joy,
From the Decripid to the Nimble boy:
Old age and youth unite, boys and old men,
To see old times, and customs new agen.

June hath XXX. Dayes

Here we have sweld our selves with Martiall glory
Of this Months bold atcheivements: the story
Of Naisby *famous battle,* Maidstone *fight,*
How on the Sea the Dutch *we put to flight;*
How Leicester, Oxford, Dunkirk, *and* Carlile,
we gain'd surrendered with little toile.

Moneth dayes.

Cease Martiall tribe to glory, pray forbeare,
'Tis now too late your Monuments too rear:
You valiant were and wise, but never just
To any but your selves, who will, you, trust?
You have adventured on most dangerous Shelves,
And Cunning you have been to undoe your selves.

July hath XXXI. days.

This moneth we chose our Generalissimo,
And full of zeale into the field we go;
Thanks to the Pulpit, that first bid us Arm;
Thanks to the City Plate, that mighty Charm,
Thanks to the honest men, more to their wives,
who durst adventure all besides their Lives.

To sing our bold adventures (though 'tis true,
They many were were) hang't bid them all Adue:
Our Garments and those Badges, which the Sword
Adorn'd us with, our intestine discord
Not onely soil'd, but also rent and torn,
And to our Foes, we are become a scorn.

Month dayes, Week dayes.

The sicle, greedy and perfidious scot,
A Bargain made, having their money got,
Repented and return'd (upon what score?)
Not of, nor from their sin, but would have more
Of their dear brethrens geuds; on th' eighteen day,
Old Noll reckon'd with them, gave them full pay.

Twice, the third day, the Scots we put to flight,
First at Dunbar, and then at Worcester fight;
Seven years we triumph'd for't, and kept a day
Of thanksgiving; And then another way
The wheele began to turn; our fame we've lost,
Death snatcht away the Captaine of our host.

September 1661.

Now for a Broom to cleanse Westminster hall,
Sweep down the Cobwebs, Scotch *colours and all;*
Away with th' Emblems of your Victories;
Although you won the field, yea've lost the prize;
O're joy not Cavaleers, *nor* Roundheads *moan,*
This Change was brought about by heaven alone.

Month dayes, Week dayes,

Who views this months Chronology must yeeld,
It hath been as prodigious in the Field,
As Councels, also as grand transactions,
As any amidst our distractions;
Distracted actions, Counsels, Apostacy,
Designes made clearly up of falsity.

At Edge-hill *and elsewhere we shed much blood,*
The true cause for't yet scarcely understood:
Here we amongst our selves to odds did fall,
Thereby we lost our strength, spirits and all:
we must be prim'd (where need's) from head to th' foot;
They peel'd us first, then grub'd us up at root.

Moneth days. Week days.

Call but to minde of this moneth the third day,
A wonder strange produc'd, what is't I pray?
A long and lasting Parliament, 'tis plain,
Oft lopt, twice feld, and yet grew up again;
They did both good and evill, were well paid,
And punish't are, or will be, I'me afraid.

November 1661.

Thanks City for your aide at Brainford *fight,*
Thanks for the treaty in the Isle of Wight,
And for your zeale 'gainst Common Prayer too,
And that, what's done, y'are willing to undoe:
And for your good affection, feasts and sport,
For all things past we humbly thank you for't.

December hath XXXI. dayes

Here Oliver *that more than* Trojan Hector,
Of our three Commonwealth's *was made* Protector;
We weary of him grew, and that's not strange.
We're weary of every thing, and long for Change,
Here crept the Rump *the third time in like Elves,*
They first undid their friends and then themselves.

29	13	30	56	93	136	179	221	264	302	329	346	360
30	13	30	57	94	137	180	223	265	303	330	347	360

Each moneth hath two pages, the first or left hand page hath 11. *Columns*; *the* 1. *month days*, 2. *week days*, 3. *Festivals, Terms and twice in the moneth the Latitude of the Planets, and the place of the Dragons head*; 4. *the place of Saturn in degrees with the Aspects of the Moon to him every day, on which they fall*; 5. *the place of Jupiter and lunar Aspects as aforesaid*; 6. *of Mars*; 7. *of the Sun*; 8. *of Venus*; 9. *of Mercury*; 10. *the place of the Moon in degrees and minuits*; 11. *the latitude of the Moon in degrees*: Note that the places of the Planets are calculated for the noon of every day. *Where note that* ♄ *is in* ♏ *till the* 8. *of* Decemb. ♃ *in* ♎ *till the* 3. *of* Novemb. *for the rest, their preceding or succeeding entrance into new signes will inform you what signes they are in.*

The second or right hand page hath three Columns; 1. *the days of the Moneth*; 2. *the Aspects of the planets among themselves, the Change, Full, and Quarters of the Moon*; 3. *hath a brief Chronologie.*

The two Tables immediately before the Ephemeris, are usefull for finding the time of High-water: The first or left hand page shews the Names of certain Ports *or Havens in and about* England, *with the number of the Points of the Compasse, making full sea*; *the other Table sheweth the time of high-water thus*; *First, finde the Haven in the first Table, and the figure which standeth against it*; *then seek the age of the Moon, which you may doe by counting how many dayes hath passed since the Moon last changed, till that present day*; *with the age of the Moon, enter the second Table, and in the first Column under the title of Age of the Moon, finde the*

Moons age; on the head of the Table, among the great figures, find the number of the point of the Compasse, and in the meeting or angle, you have the time of High-water, in houres and minuits. For example, I would know the time of High-water at London *on the 30. day of* January: *I finde the Moon to be ten dayes old, first, I finde* London *in the first Table, and against it the figure 5 I enter the second Table with 10, the Moons age, in the first column, and against that in the column under 5. I finde 11. which tells me it is high-water at* London *at 11. of the clock: It is full sea at* Bristoll *at the same time at 45. min. after 2. Note that the time here found doth not hold exactly, for that latitude of the Moon, boisterous windes, landfloods, &c. doe much (at sometimes) alter the Tides, and make them flow sooner or latter.*

The other five Tables following the Ephemeris, I shall briefly explain, and shew you how to erect a celestial scheam or figure of the heavens by them: The first Table serves for converting of houres and minuits of time, into degrees of the Equator, or contrariwise if you have occasion: The second is a Table of right Ascentions, serving to finde the degree of the Cuspe of the Midheaven: the thrid is a Table of Oblique Ascentions for the pole of position 32. degrees, and serveth to finde the sign and degree of the Cuspes of the 11. and 3. houses. The fourth serveth for the Latitude or pole 47. degrees 28. min. and serveth to finde the Cuspes of the 12. and 2. houses. The last is a Table of oblique Ascention for 51. degrees and 32. min. fitted for the Meridian of *London*, and by it you are to finde the Cuspe of the Ascendant or first house. I shall lay down an example or two, which will serve sufficiently for the instructing of the ingenious young Student, without farther precept. I would by these Tables erect a figure of heaven, for the moment of time,

the

the ſun enters *Aries*, which is the 9. day 12. h, and 40. min. after noon, firſt I convert theſe houres and minuits into degrees of the Equator. I enter the table under h. and m. and find 12. houſe & 40. m and againſt it ſtandeth 190. degree. I ſeek for the ſuns right Aſcention in the ſecond Table in the firſt column. I finde 0. degrees and min. of *Aries*, and the right Aſcention 0. deg. 0. min. had there been any degrees of right Aſcention it muſt have been added to the houres and min. (converted into degrees of the Equator) and the ſum is the right Aſcention of the midheaven:

Now the right Aſcention of midheaven is 190. degrees. add to 30. deg. and it produceth 220. deg. obl aſc. of 11. houſe add 30. degr. and it maketh 250. obl. aſcen. of 12. houſe add 30. deg. and it amounts to 280. the obl. aſc. of 1. houſe add 30. deg. more, and it makes 310. obl. aſcen. of 2. houſe. to add 30. deg. and it produceth 340. obl. aſcen. of 3. houſe. Seek the right Aſcention of the midheaven in the 2. Table, *viz.* of right Aſcentions, and it gives you the Cuſp of the midheaven or tenth houſe; therefore I ſeek for 190. degrees in the Table aforeſaid, and in the 8. columne I finde it under Libra: I then guide my eye to the firſt column, to ſee what degree anſwereth thereto, and I finde 11. which informs me that the Cuſp of the midheaven is 11. degr. of Libra: To proceed the oblique Aſcention of the 11. houſe is 220. degree. I repaire to the next Table, *viz.* of oblique Aſcention for 32. deg. and ſeek for that number, I finde 220. in the 9th. column under Scorpio, the number anſwering thereto is 4. in the firſt column, therefore the 4. degree of Scorpio is the Cuſpe of the 11. houſe. The Cuſpe of the 12. houſe is ſo to be found, the oblique Aſcention of the Cuſps 250. degree. I repaire to the Table for 47. deg. 28. min. and ſeek for my number; I finde not my number preciſely, the next leſſe, is 249. the next greater is 251. the difference is 2. deg. and the numbers anſwering in the firſt column is 21, 22. then I ſay if two deg. gives one degr. or 60. min. what ſhall one degree give 30. min. or half a degree, therefore the Cuſp of the 12. houſe is 21. deg. 30. min. of Scorpio. Then I repaire to the laſt Table for the Latitude of 51. deg. 32. min. and enter

with

with the oblique Ascention of the Ascendant, which is 280, and I finde it in the 10. column under ♐, and the number answering in the first is 11. therefore the Cusp of the first house is 11. deg. of *Sagitarius*, the 2. house hath the same pole with the 12. and the 3. with the 11. therefore I enter the Table for 47. deg. 28. min. for the second, and the Table for 32. with the oblique Ascention of the 3. and it gives for the Cuspe of the 2. house, 11. degree of Capricornus; and for the 3. house, the first degree of Pisces, the Cuspes of the 6. opposite houses, have the same degrees of the opposite signes, as you may behold in the figure.

Thus you may easily set a figure for the Autumnal quarter or when the Sun entereth Libra, which is this year the 12. of of *Septem.* 6. hou. 39. min. P. M. D. the Cusps are found as before is taught.

☉. 0. deg. Libra his right Ascention is 180.
6. hour, 39. m. convert into time are 100.
added is the right Ascen. of M. C. 280. 9. deg. ♍ 4. h. 9. de. ♋
ad 30. the Obl. Ascen. of 11. ho. 310. 24. deg. ♍. 5. 24. de. ♋.
ad 30. the Obl. Ascen. of 12. ho. 340. 21. deg. ♎. 6. h. 21. d. ♌.
ad 30. to the obl. Asc. of the ascendant 370.
the whole Circle being abstracted 360. remains 10.
which is the obl. Asc. of 2. house 23. deg. ♈. 7. h. 23. d. ♎
ad 30. is the obl. Ascen. 2. house 40. 7. deg. ♉. 8. h. 7. d. ♐.
add 30. is the obl. ascen. 3. house 70. 26. d. ♊. 9. h. 26. d. ♑.

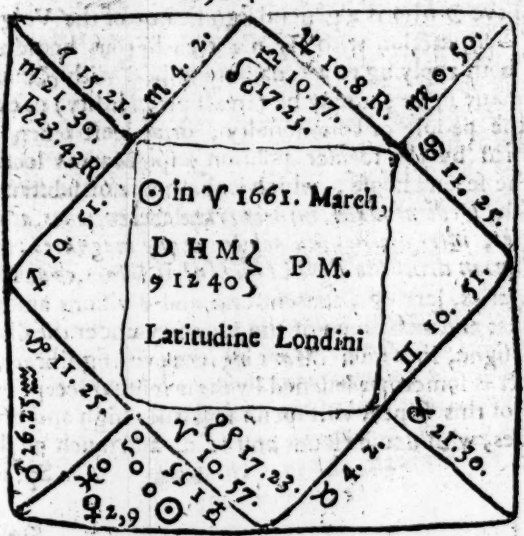
Having now shewed you to erect a Scheam or figure, I should in the next place teach you how to place the Planets in the Scheam, but I forbear for want of room, and refer you to many Authors extant, that are plain and easie.

Astrologicall Observations for the Year of Christ, 1661.

Pallas *I thee implore to be my guide,*
To keep my Genius upright, lest it slide
Out of truths obscure path; Anchor my lines,
More firm, then these unsetled giddy times:
These times when Government can find no basis,
Supremacy not known for various faces.
who one day rules the roast, and sits i'th' throne,
Next ruled is by him, who he trampled on:

Bold Mars *whose* sword *was* Scepter, Throne *and* Crown,
Buckles to fate, and submits to the frown
Of angry fortune, wise men finde it true,
Whilest heaven hath motion, Changes will ensue:
I feare them not, though they come every day,
Let who will rule, I've learned to obey.
Let greedy worldlings mourn, whilest I dare smile,
My burthens light, I'me loaded not with spoile.
Nor need I care, whether my Fetters be
Made of one link or more, all's one to me.
Why should my Pen Engage for States *or* Kings,
My Genius *contemplates on* heavenly things:
My empty pockets makes me 'daine to feare
Plunder or Sequestration, who e're
The raging Sword doth weild, who ere doth hold
The ruling Scepter, I'me not guilt *with gold.*
Cæsar I'le give his due, I'le not Aspire
But to live happy; can you more desire?
I'le nothing dread, but venter will to send
A New-years *gift unto my* Country *friend.*

190.4.



At the Full Moon preventionall we have ♄ in ♏ neer the degree aſcending, in Quartile Aſpect to Mars; the ☽ in the Midheaven, and ☉ and ☿ in *Imo Cæli*. At the poſtventionall Conjunction, we have Mars culmilating, and ♀ in the midheaven. In this figure we have ♃ culminating in the tenth degree of the ballance Retrograde, and out of all eſſentiall dignities, ☉ and ☿ approaching to his oppoſition. There is a friendly reception between him and ♀ and ſhe in the third houſe in her exaltation, and the ſtrongeſt planet in the Scheam, *Bonatus* ſaith, *Significat annum ſecuritatis & quietudinis, & aptabuntur res: erit bonum in honoribus, & juſtitia, & largitas & rectitudo atque pax.* It ſignifieth a ſecure and peaceable year; affairs neer ſettlement; among the great ones it ſignifieth the enjoyment of good things, Juſtice, Security, Plenty and Peace. *Si autem fuerit recepta, invenient ruſtici bonum à regibus, & divitibus atque magnatibus, & diligent ruſtici rem ſuum, & obedient ei.* If ſhe ſhall be received (as here ſhe is) the Commonalty or men of the loweſt degree, ſhall receive good from Kings, Noblemen and rich men, and ſhall like the proceedings, and be obedient to their Superiours; ſaith the ſame Author.

But we have ☽ who is a general ſignificator of the Vulgar, going to a Conjunction with ♄ in a treacherous houſe and ſigne, and both applying to a Quadrate Aſpect with ♂, and he in a humane ſigne; it may be (in all probability) of evill portent to the people or commonalty, or at leaſt leſſen the good ſignified by the former poſition; for Mars is locally placed in the ſecond houſe, which is the houſe of ſubſtance. *Bonatus* ſaith, *Venient mala, injuria, rixæ contentiones, atque contrarietates, inter divites ſeu nobiles atque magnates regionum, quæ ſunt in diviſione ſigni in quo fuerit Mars, &c.* Many evils, injuries, jarrings, contentions, and diviſions among the rich, great and noblemen of the Country under the diviſion of the ſigne, in which *Mars* is; the evill ſignification of this Aſpect is ſomewhat leſſened by their mutual reception. The effects of this Aſpect will ſpend it ſelf in high and boiſterous windes, with denſe clouds and rain, and much of the

Spring

Spring quarrer to be ſo inclined: But the oppoſition of ☉ and ♄, and ♃ and ☿ from dry manſions, ſoon raiſeth wholeſome blaſts ot winde, diſperſing the clouds, and cauſing at ſometimes a pleaſant and ſerene ſeaſon.

Of the Summer Quarter.

The Summer Quarter begins when ☉ enters ♋ which makes the longeſt day and ſhorteſt night, which this year 1661. is on Tueſday the 11. of June at 36. m. paſt 3. in the morning 27. deg. of ♊ aſcending our Horizon, and the 22. deg. of ♒ occupying the Cuſp of the midheaven, the planet Venus upon the Cuſpis of our Aſcendant. The poſition of the Planets in this figure, portend a pleaſant ſeaſon, fertile and much more temperate then the Spring Quarter.

Of Autumne.

The Autumnal Quarter begins when Sol enters the firſt ſcruple of the ballance, at which time the dayes and nights are equall in length all the world over, the poles excepted; and this year it happeneth on Thurſday the 12. of *September* at 39 min. paſt 6. at night. At which time the 23. degr. of the Ram Horoſcopath, and the *medium Cœli* poſſeſſed by the 9. degree of the Goat. In the figure we have ♄ and ☿ in the weſtern Angle, ſeparating from Conjunction, ſomewhat above a degree diſtant from each other, they are accompanied with Stars of their own nature, and benevolent in flux; which ſeems to deſign us very ſeaſonable and good weather; if ♂ his being on the Cuſpis of the north Angle in Cancer, a watry ſign, and ♄ intercepted in the ſeventh houſe in the Scorpion, of the ſame nature alſo, procureth not much rain and wet, which they will do, when they Aſpect each other, or are aſpected with Stars of that nature and influx.

Of winter.

The Winter Quarter beginneth when the ſun entereth Capricornus or the Goat, at which time he hath made his fartheſt progreſſe towards the South pole, and hath the greateſt declination from us, that inhabit the northern Hemiſphere, making our ſhorteſt day and longeſt night, which ingreſſe happeneth this Year on the 11. day of *December* being Wed-

neſday

nesday at 17. minuits past 6. in the morning, at which instant the 6. degree of Sagitarious is on the Cuspe of the *Ascendant*: and like degrees of the Ballance mediates the heaven. The Sun, Moon and Mercury just transited over the Cusp of the second house, into the *East Finitor*, ☽ just leaving that Angle.

Of Eclipses happening this Year.

FOure Eclipses happen this Year, two of the Sun and as many of the Moon, two of which will be visible to us, *viz.* the first of the Sun, and the last of the Moon. The first of the Sun happeneth on Wednesday the 20. of *March*,

	h. m. s.	
The beginning of the Eclipse at	8. 34. 30.	in the morning.
The greatest obscuration at	9. 37. 4.	
The visible conjunction at	9. 39. 31	M. C. 2. deg. 17.
The end of the Eclipse at	10. 39. 38	m. ♓. Ascend 6.
The totall duration is	2. 5. 8	deg. 37. m. ♋.
The digits Eclipsed are	7. 10. 14	

This Eclipse happeneth in the eleventh house of the figure; the signe is Æquinoctiall and of the fiery triplicity, *Æquinoctialia significationem dant Sacrorum & divinæ culturæ*, saith *Ptolomy*, Equinoctial signes have signification of things appertaining to Religion and divine Worship; Others say, that an Eclisp of the Sun and Moon in the Equinoctial signs are prejudicial to the aire and present season. *Eclipses Luminarium in triangularitate ignea, denunciat armentorum pecudumque interitas magni regis seu principis exilia, carceres aut internectionem.* Eclipses of the Luminaries in the fiery Trigon, threaten the heards both of smal and great cattell with death; the Banishment, imprisonment or death of some King, Prince, or eminent person; among the Commonalty it excites enmity and jarring one with another, much dissimulation, the motion of Armies, horrible Wars, Slaughters, Thefts, Murders, Depopulations, Abortions,

sharp

sharp Feavers, and diseases occasioned by heat, scarcity of fruit, admirable mutations in many things, especially in those Countries Subject unto the signe, wherein the Eclipse happeneth. Another Author saith somewhat to the same purpose, that an Eclipse in the second Decanate of Aries signifieth, *Regis carcerem, mærorem, aut mortis periculum, arborumque fructiferarum corruptionem, ac terræ nascentium putredinem*; Imprisonment or losse of liberty, sorrow or danger of death unto some Prince or eminent man in Authority, destruction to the fruit bearing Trees, and the rottennesse and putrefaction of such things as the Earth produceth: the Rulers of this Eclipse are Mars and Jupiter, Mars being Ruler signifieth many such evills and mischievous events as are before recited; But Jupiter sharing with him do very much lessen the evill, for he signifieth fertility, joy and tranquility, makes men thrive, gives health and quietnesse of mind, gifts and favours from Kings, give Magistrates fame and estimation, procures a wholesome aire, and an encrease of Religious or Clergy men, and they to attain to high and honourable preferment; New customes and priviledges are conferred on the people, new Corporations, new Honours, *&c.* Some there are that will not allow any good effects to flow from an Eclipse. I forbear further discourse of the effects of this Eclipse, onely that those Kingdomes, Nations, Cities and Towns under ♈ ♎ ♋ ♍ shall in greater measure be sensible of the effects of this and the last Lunar Eclipse, of which in its place.

The second is an Eclipse of the Moon, on Thursday the 4. of Aprill, 42. m. after 3. in the after-noon; the digits Eclipsed are not 4, it continues somewhat above 2. houres, it is a small eclipse and not visible to us, therefore I shall say no more of it.

The third is an Eclipse of the Sun upon Friday the 13th. day of *Sept.* neer 11. in the forenoon, but by reason of the Paralax and south Latitude of the ☽, it cannot be seen by us to them that live under the Longitude of 23. deg. and 36. degrees

grees of south Latitude, it will appear almost totall, *viz.* in South *Africk*, St. *Thomas* Isle, and the neighbouring Southern land (as yet) unknown to us.

The fourth and last is a Lunar Eclipse, and it is celebrated on Saturday the 28. day of *September* in the morn.

	h.	m.	s.		
The beginning is at	1.	41.	45.	in the morning.	
The greatest Obscuration	2.	58.	34.		
The visible Opposition	3.	05.	02.	*Medium Cœli*	2. *deg.*
The end at	4.	15.	23.		16. *min.* ♊
The totall duration,	2.	33.	38.	*Horoscope.*	9. *degr.* ♌
The Digits Eclipsed	6.	55.	59.		*min.* ♍

The Eclipsed Luminary is in the 8. house of the figure: what an Eclipse in an Equinoctiall and fiery signe signifieth, I have before hinted; *Si in medio Arietis Denario obscuratur luna, pestilentiam portendit*, If the Moon be eclipsed in the Second face of *Aries*, it portendeth a pestilence; and a fatality in most diseases, few escaping that fall sick. And this judgment is so much the more to be credited, for as much as *Mars*, who is lord of the Eclipse, is also lord of the 8. house, and in a quadrate Aspect to the Luminaries, which will much agravate the effect aforenamed.

This year also is a Mercuriall eclipse, or an appearance of *Mercury* in the body of the Sun; according to the Tables of our industrious and most ingenious Country man *Vincent Wing*: it happeneth on the 23. of *Aprill* about 54. min. afternoon, in the 13. degree and 29. min. of *Taurus*. According to the calculation of *Eichstadius*, this Conjunction should happen the same day in the morning soon after five; And *Argol* would have it at nine at night the 21. day; the curious observation hereof would be much advantagious to the further restauration of Astronomy.

Certain

Certain neceſſary Rules for the adminiſtration of Phyſick, letting of Blood, &c.

THe powers of the body of man are threefold, *viz.* Naturall, Vitall and Animall; the natural Power is ſeated in the Liver and is governed by *Jupiter*, aſſiſted by *Luna* and *Venus*. From this is bred the four humours, *viz.* Blood, Choller, Phlegme and Melancholly. Blood is made of meat, perfectly concocted, in quality hot and moiſt, and is under *Jupiter*. Choller is made of meat more then perfectly concocted, It is the Spume or Froth of the Blood, hot and dry under *Mars*. Phlegme is made of meat not perfectly digeſted; it is cold and moiſt in quality under the *Moon* and *Venus*. Melancholly is the Sediment of Blood, cold and dry in quality, governed by *Saturn*.

The naturall powers comprehends theſe foure adminiſtring Virtues or Faculties, *viz.* Attractive, Retentive, Digeſtive and Expulſive; the Attractive faculty is hot and dry under the influence of the *Sun* and *Mars*, fortified when the Moon paſſeth through *Aries*, *Leo*, *Sagitarius*; the retentive faculty is cold and dry under *Saturn*, and is ſtrengthened, the Moon in *Taurus*, *Virgo*, *Capricornus*; the digeſtive is hot and moiſt ruled by *Jupiter*, fortified the Moon paſſing through *Gemini*, *Libra*, *Aquarius*. The expulſive is cold and moiſt under the Moon, aſſiſted by the Moon in *Cancer*, *Virgo*, or *Piſces*. In ſtrengthening theſe faculties, let the Moon be in one of thoſe ſignes, or let one of them Aſcend. The Vitall Power is ſeated in the heart, and is governed by the Sun, it is ſtrengthened by its medicines, and is beſt done when the Sun is in Aſpect with the fortunes, *viz.* *Jupiter* and *Venus*.

The Animall faculty hath its reſidence in the brain, and is divided into Intellective and Senſitive; the firſt is under the influence of *Mercury*, the other of the Moon, and are both aſſiſted by the benevolent rays of *Jupiter* and *Venus*.

The

The Moon in *Cancer*, ♋ Purge Melancholly,
Scorpio or *Piſces* in ♏ ♓ Purge Choller,
Sextile or *Trine* to ☉ ♂ Purge Phlegme.

To prepare humors let the Moon be in *Gemini*, *Libra*, *Aquari*
Take Gliſters the *Moon* in *Aries*, *Libra*, *Scorpio*.
Take Vomits the *Moon* in *Aries*, *Taurus*, *Capricor*
Take Gargariſmes the Moon in *ries*, *Can*
Purge the head by ſneezing the Moon in *Cancer*, *Leo*, *V*
Stop Rhuemes the Moon in *Aries*, *Taurus*, *Capricor*

For Bathing let the Moon be in ſignes contrary to
Nature of the Diſeaſe. Sweat two or three dayes after
Change, or about the Full Moon; and let the moon b
